

Simtrol

# Simtrol Arraigner™

Part of Simtrol's Suite of Law Enforcement and Judicial Systems Solutions

Traditional video arraignment products offer little more than ad hoc, rudimentary point-to-point video connections.

Curiax digital arraignment offers full **multi-point videoconferencing** technology coupled with **powerful workflow functionality** and **device control** to manage arrest processing – from the 911 call to final arraignment!

## Key Features

### Digital Workflow Management –

- Drives creation and processing of arraignment case folders across multiple organizations
- Provides immediate status notifications to users
- Prevents lost and incomplete documentation

**Digital Documents and Signatures** - Expedites document completion and approval. Revision tracking ensures document integrity.

**Document Repository** - Facilitates document storage and retrieval by authorized users from within multiple organizations. Folders store a variety of digital multimedia files, such as digital 911 audio, fingerprints, and mug shots.

**Multi-Point Videoconferencing** – Provides clear remote audio-video communication among all arraignment participants.

**Digital Video Recording** – Saves digital video file of arraignment proceeding in the digital case folder.

**Remote Device Monitoring and Control** – Proactively monitors hardware, generates notifications, and provides powerful server-based diagnostics and control from a central location.

**IBM WebSphere Platform** – Supports application server, mass storage, and database functions.

**SOA Interfaces** – Service Oriented Architecture streamlines interfacing with other criminal justice applications.

## Key Benefits

### Cost Savings –

- Generates return on investment in less than one year (estimated).
- Reduces inmate transportation costs.
- Reduces time in custody and minimizes county's liability for inmate health and welfare.

### Public Safety –

- Minimizes presence of dangerous inmates in public courthouses.

### Due Process –

- Allows low-risk offenders to be arraigned and released more quickly.
- Promotes timely arraignments, which reduces habeas corpus petitions for dismissal of charges and release of dangerous offenders.

### Efficiency and Productivity –

- Permits arraignment of more defendants using fewer resources.
- Reduces number of officers transporting and guarding inmates, which increases number of officers on the streets.
- Eliminates processing bottlenecks.

### Organization –

- Aggregates documents from multiple organizations and stores them in a single digital arraignment folder that can be accessed by all authorized users.
- Prevents lost and incomplete documentation.

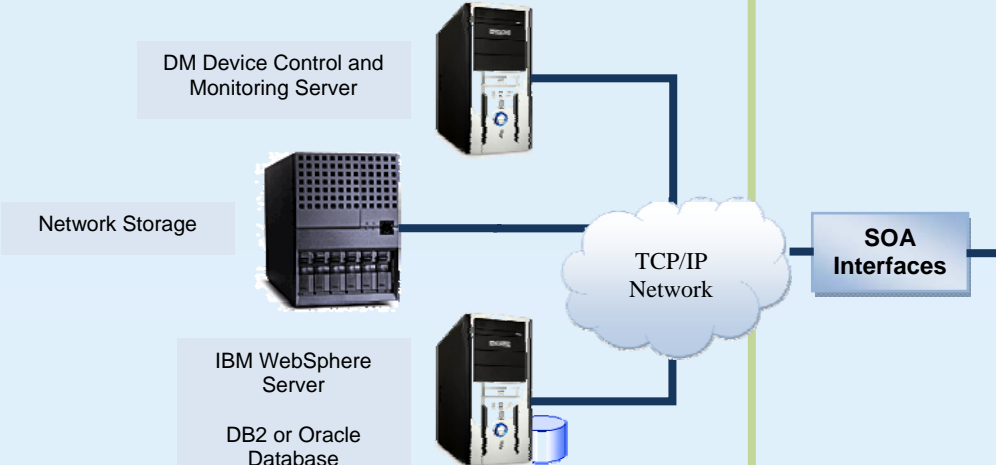

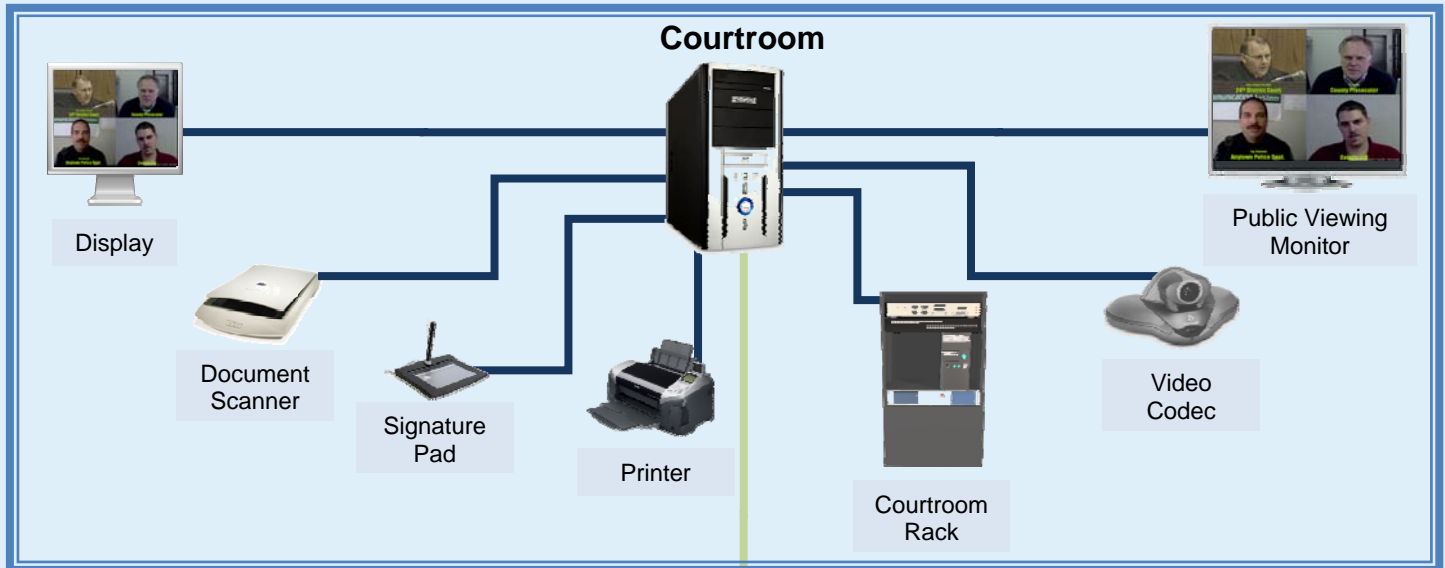

### Communication –

- Streamlines communication and data sharing between law enforcement and prosecutor during case development.

### Flexibility and Convenience –

- Police, prosecutors, and court personnel can participate in arraignment process from office, court, home, or other remote locations.
